

Practical DevOps – CI/CD Pipeline and deploying applications on Azure AKS

Currently, the assignment have the issue at step:

<https://www.notion.so/Practical-DevOps-CI-CD-Pipeline-and-deploying-applications-on-Azure-AKS-0b67336301f54688aef62e4b42553dc0?pvs=4#7d220011e5ba48c38619e95904a5b01f>

1. Source Code Management

msa application repository:

https://github.com/nvvuong2000/sd4413_msa

aws infrastructure repository:

https://github.com/nvvuong2000/sd4413_azure_infrastructure

2. Use Terraform to provision Azure Virtual Network, ACR and AKS on Azure.

```
vuongnguyenv@VNNOT02236:~/sd4413_azure_infrastructure/sd4413-acr-aks-terraform$ terraform validate
Success! The configuration is valid.

vuongnguyenv@VNNOT02236:~/sd4413_azure_infrastructure/sd4413-acr-aks-terraform$ terraform apply -var-file="dev.tfvars" -
auto-approve

Terraform used the selected providers to generate the following execution plan. Resource actions are indicated with the
following symbols:
  + create

Terraform will perform the following actions:

# azurerms_container_registry.acr will be created
+ resource "azurerms_container_registry" "acr" {
  + admin_enabled           = false
  + admin_password          = (sensitive value)
  + admin_username          = (known after apply)
  + encryption              = (known after apply)
